1. The drawings are objected to because the boxes in fig. 1 need to be labeled.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

Art Unit: 3662

- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (f) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

3. Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As to claim 1, lines 14-15; claim 10, lines 13-14; claim 11, lines 9-10, "by fitting the measured arrival times of the signal components to the known positions of the identified reflectors" is unclear. It's unclear as what it's mean by "fitting" the measured arrival times of the signal components to the known positions of the identified reflectors.

As to claim 1, line 14, "calculating the unknown position" is unclear. It's unclear as calculating the unknown position of what.

Claims 2-9, 12-14 depend from indefinite antecedent claims.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Erickson et al (Pat. No. 5,534,876) or Lightfoot (Pat. No. 4,746,924).

Erickson et al teach a positioning system, apparatus and method using a transmitter device having a radio frequency transmitter and a receiver device having a receiver, the method comprising transmitting a signal from the transmitter 16 to the receiver 14, the signal having a number of signal components travelling from the transmitter to the receiver via the reflectors or directly, receiving a plurality of the signal components of the transmitted signal in the receiver 14, measuring 22 the arrival times of the signal components, identifying the signal components with the reflectors off which the signal component has reflected 18, and calculating 24 the unknown position by fitting the measured arrival times of the signal components to the known positions of the identified reflectors and the position of the reference device.

Lightfoot teach a positioning system, apparatus and method using a transmitter device having a radio frequency transmitter and a receiver device having a receiver, the method comprising transmitting a signal from the transmitter 22 to the receiver 20, the

signal having a number of signal components travelling from the transmitter to the receiver via the reflectors or directly, receiving a plurality of the signal components of the transmitted signal in the receiver 20, measuring (abstract) the arrival times of the signal components, identifying the signal components with the reflectors 24 off which the signal component has reflected, and calculating (26; 100; abstract) the unknown unknown position by fitting the measured arrival times of the signal components to the known positions of the identified reflectors and the position of the reference device.

6. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Holt (Pat. No. 6,580,393).

Holt teaches teach a positioning system, apparatus and method using a transmitter device having a radio frequency transmitter and a receiver device having a receiver, the method comprising transmitting a signal from the transmitter 64 to the receiver 62, the signal having a number of signal components travelling from the transmitter to the receiver via the reflectors or directly, receiving a plurality of the signal components of the transmitted signal in the receiver 62, measuring (fig. 6; fig. 8; abstract) the arrival times of the signal components, identifying the signal components with the reflectors off which the signal component has reflected, and calculating (abstract) the unknown position by fitting the measured arrival times of the signal components to the known positions of the identified reflectors and the position of the reference device.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
